

## PROJECT!

**PREDATOR AND PREY JOURNAL**

Good scientists keep track of many things. They write down the things they wonder about and the questions they ask. They record the steps they take in the scientific method. Create a special notebook to help you keep track of what you do and learn about predators and prey.

**SUPPLIES**

- \* 3–4 sheets of 11-by-17-inch paper
- \* hole punch
- \* 5–10 sheets lined paper
- \* pencil
- \* 3-ring binder

**1** Fold the sheets of 11-by-17-inch paper in half with a hamburger fold. You will use these when you do activities comparing predators and prey. You can record your observations about each group on different sides and see the results next to each other.

**2** Place a piece of lined paper so the holes are along the folded edge of the 11-by-17-inch paper. Use the hole punch to make three holes in the 11-by-17-inch paper pieces so they can be kept in your binder.

**3** Place all the sheets in the binder. You will use these pages to record the steps of the scientific method and your thoughts about the questions in each chapter.

**4** Decorate the cover and get ready to learn!
