

Activity Time!

How are HUMANS Adapted?

Humans are mammals, too. And we live in many different ecosystems on earth: deserts, tropical rainforests, arctic regions, mountains, and grasslands.

Whale

WHAT YOU NEED

paper, colored pencils or crayons

WHAT YOU DO

Think about how people might be adapted to living in different places.

What do they wear?

How do they move around?

What do their homes look like?

What kinds of food do they eat?

Draw a person (or a family) from one place.

What kinds of clothes are they wearing?

How do the kids get to school?

What do they eat for dinner?

Their adaptations will depend on the weather and the environment where they live.

Now, try drawing someone from another ecosystem.

How are they the same as the others? How are they different?

Camel
