Amphibians Near You

Amphibians are found all around the world, except Antarctica. That means there are amphibians living near you! And every amphibian has many adaptations that help it survive. They must be able to find food, take shelter, and stay safe.

WHAT YOU NEED

a notebook and paper, research materials

WHAT YOU DO

Choose an amphibian to study that lives near you. Find out what adaptations it has. Some of these adaptations have to do with how the amphibian looks. Other adaptations have to do with how it acts.

You might go to a zoo or aquarium to talk to an expert. You can visit a park and talk to a ranger.

Head to the library and find books and websites for more information. How many adaptations can you identify?

Now, draw or find a picture of your amphibian. Then, share your research on all of the amphibian's adaptations with your friends!
